7 to 6	42:36	21 to 8	$3\frac{1}{2}$ to 3

Double Number Line Reproducible

Graph Reproducible

**Example 3: Matching**

Match an equation, table, and graph that represent the same unit rate. Students work individually or in pairs.

Cut apart the data representations below and supply each student-pair with a set.

$m = 65h$	$m = 45h$	$m = 55h$																														
$m = 70h$	$m = 50h$	$m = 60h$																														
<table border="1" style="width: 100%; border-collapse: collapse; text-align: center;"> <tr><td><i>h</i></td><td>0</td><td>2</td><td>4</td><td>6</td></tr> <tr><td><i>m</i></td><td>0</td><td>130</td><td>260</td><td>390</td></tr> </table>	<i>h</i>	0	2	4	6	<i>m</i>	0	130	260	390	<table border="1" style="width: 100%; border-collapse: collapse; text-align: center;"> <tr><td><i>h</i></td><td>0</td><td>3</td><td>6</td><td>9</td></tr> <tr><td><i>m</i></td><td>0</td><td>135</td><td>270</td><td>405</td></tr> </table>	<i>h</i>	0	3	6	9	<i>m</i>	0	135	270	405	<table border="1" style="width: 100%; border-collapse: collapse; text-align: center;"> <tr><td><i>h</i></td><td>0</td><td>5</td><td>10</td><td>15</td></tr> <tr><td><i>m</i></td><td>0</td><td>275</td><td>550</td><td>825</td></tr> </table>	<i>h</i>	0	5	10	15	<i>m</i>	0	275	550	825

U.S. Customary Length	Conversion
Inch (in.)	1 in. = $\frac{1}{12}$ ft.
Foot (ft.)	1 ft. = 12 in.
Yard (yd.)	1 yd. = 3 ft. 1 yd. = 36 in.
Mile (mi.)	1 mi. = 1,760 yd. 1 mi. = 5,280 ft.

Metric Length	Conversion
Centimeter (cm)	1 cm = 10 mm
Meter (m)	1 m = 100 cm 1 m = 1,000 mm
Kilometer (km)	1 km = 1,000 m

U.S. Customary Weight	Conversion
Pound (lb.)	1 lb. = 16 oz.
Ton (T.)	1 T. = 2,000 lb.

Metric Capacity	Conversion
Liter (L)	1 L = 1,000 ml
Kiloliter (kL)	1 kL = 1,000 L

U.S. Customary Capacity	Conversion
Cup (c.)	1 c. = 8 fluid ounces
Pint (pt.)	1 pt. = 2 c.
Quart (qt.)	1 qt. = 4 c. 1 qt. = 2 pt. 1 qt. = 32 fluid ounces
Gallon (gal.)	1 gal. = 4 qt. 1 gal. = 8 pt. 1 gal. = 16 c. 1 gal. = 128 fluid ounces

Metric Mass	Conversion
Gram (g)	1 g = 1,000 mg
Kilogram (kg)	1 kg = 1,000 g

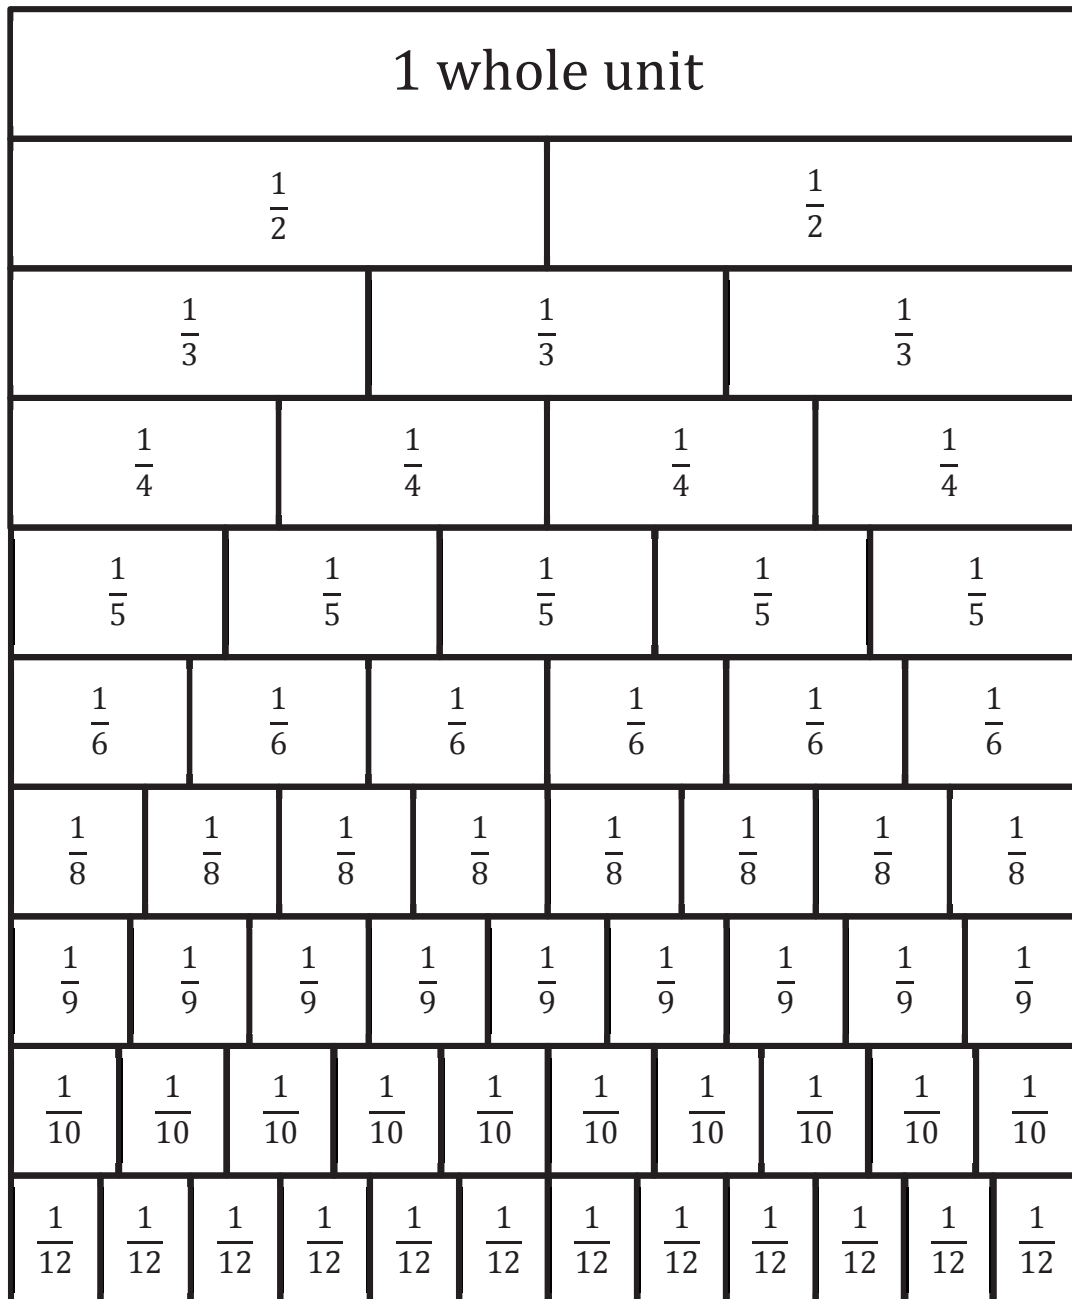

10 × 10 Grid Reproducible

Fraction cards to use at the beginning of class:

$\frac{1}{2}$	$\frac{3}{4}$	$\frac{2}{3}$	$\frac{2}{5}$
$\frac{3}{5}$	$\frac{4}{5}$	$\frac{1}{5}$	$\frac{2}{6}$
$\frac{1}{3}$	$\frac{3}{6}$	$\frac{4}{6}$	$\frac{5}{6}$
$\frac{7}{8}$	$\frac{5}{8}$	$\frac{1}{8}$	$\frac{3}{8}$

## Memory Game

A. $\frac{3}{4} \div 6\frac{2}{3}$	$\frac{9}{80}$	B. $\frac{1}{3} \div 4\frac{3}{4}$	$\frac{4}{57}$
C. $\frac{2}{5} \div 1\frac{7}{8}$	$\frac{16}{75}$	D. $7\frac{1}{2} \div \frac{5}{6}$	9
E. $3\frac{4}{7} \div \frac{5}{8}$	$5\frac{5}{7}$	F. $5\frac{5}{8} \div \frac{9}{10}$	$6\frac{1}{4}$
G. $\frac{1}{4} \div 10\frac{11}{12}$	$\frac{3}{131}$	H. $5\frac{3}{4} \div \frac{5}{9}$	$10\frac{7}{20}$

### Exploratory Challenge Reproducible

#### Station 1: Factors and GCF

Choose one of these problems that has not yet been solved. Solve it together on your student page. Then, use your marker to copy your work neatly on the chart paper. Use your marker to cross out your choice so that the next group solves a different problem.

Find the greatest common factor of one of these pairs: 30, 50; 30, 45; 45, 60; 42, 70; 96, 144.

Next, choose one of these problems that has not yet been solved:

- There are 18 girls and 24 boys who want to participate in a Trivia Challenge. If each team must have the same number of girls and boys, what is the greatest number of teams that can enter? How many boys and girls will be on each team?
- The Ski Club members are preparing identical welcome kits for the new skiers. They have 60 hand warmer packets and 48 foot warmer packets. What is the greatest number of kits they can prepare using all of the hand and foot warmer packets? How many hand warmer packets and foot warmer packets will be in each welcome kit?
- There are 435 representatives and 100 senators serving in the United States Congress. How many identical groups with the same number of representatives and senators could be formed from all of Congress if we want the largest groups possible? How many representatives and senators will be in each group?
- Is the GCF of a pair of numbers ever equal to one of the numbers? Explain with an example.
- Is the GCF of a pair of numbers ever greater than both numbers? Explain with an example.

**Station 2: Multiples and LCM**

Choose one of these problems that has not yet been solved. Solve it together on your student page. Then, use your marker to copy your work neatly on the chart paper. Use your marker to cross out your choice so that the next group solves a different problem.

Find the least common multiple of one of these pairs: 9, 12; 8, 18; 4, 30; 12, 30; 20, 50.

Next, choose one of these problems that has not yet been solved:

- a. Hot dogs come packed 10 in a package. Hot dog buns come packed 8 in a package. If we want one hot dog for each bun for a picnic, with none left over, what is the least amount of each we need to buy? How many packages of each item would we have to buy?
- b. Starting at 6:00 a.m., a bus makes a stop at my street corner every 15 minutes. Also starting at 6:00 a.m., a taxi cab comes by every 12 minutes. What is the next time there will be a bus and a taxi at the corner at the same time?
- c. Two gears in a machine are aligned by a mark drawn from the center of one gear to the center of the other. If the first gear has 24 teeth, and the second gear has 40 teeth, how many revolutions of the first gear are needed until the marks line up again?
- d. Is the LCM of a pair of numbers ever equal to one of the numbers? Explain with an example.
- e. Is the LCM of a pair of numbers ever less than both numbers? Explain with an example.

Solve it together on your student page. Then, use your marker to copy your work neatly on this chart paper. Use your marker to cross out your choice so that the next group solves a different problem.

**Station 3: Using Prime Factors to Determine GCF**

Choose one of these problems that has not yet been solved. Solve it together on your student page. Then, use your marker to copy your work neatly on the chart paper. Use your marker to cross out your choice so that the next group solves a different problem.

Use Prime Factors to find the Greatest Common Factor of one of the following pairs of numbers:

30, 50    30, 45    45, 60    42, 70    96, 144

Next, choose one of these problems that has not yet been solved:

- Would you rather find all the factors of a number or find all the prime factors of a number? Why?
- Find the GCF of your original pair of numbers.
- Is the product of your LCM and GCF less than, greater than, or equal to the product of your numbers?
- Glenn's favorite number is very special because it reminds him of the day his daughter, Sarah, was born. The factors of this number do not repeat, and all of the prime numbers are less than 12. What is Glenn's number? When was Sarah born?

**Station 4: Applying Factors to the Distributive Property**

Study these examples of how factors apply to the distributive property.

$$8 + 12 = 4(2) + 4(3) = 4(2 + 3) = 20$$

$$4(2) + 4(3) = 4(5) = 20$$

$$15 + 25 = 5(3) + 5(5) = 5(3 + 5) = 40$$

$$5(3) + 5(5) = 5(8) = 40$$

$$36 - 24 = 4(9) - 4(6) = 4(9 - 6) = 12$$

$$4(9) - 4(6) = 4(3) = 12$$

Choose one of these problems that has not yet been solved. Solve it together on your student page. Then, use your marker to copy your work neatly on the chart paper. Use your marker to cross out your choice so that the next group solves a different problem.

Find the GCF from the two numbers, and rewrite the sum using the distributive property.

1.  $12 + 18 =$

2.  $42 + 14 =$

3.  $36 + 27 =$

4.  $16 + 72 =$

5.  $44 + 33 =$

Next, add another new example to one of these two statements applying factors to the distributive property.

Choose any numbers for  $n$ ,  $a$ , and  $b$ .

$$n(a) + n(b) = n(a + b)$$

$$n(a) - n(b) = n(a - b)$$

# Station A

Make a sketch of the figure. Then, calculate the volume.

Rectangular prism:

$$\text{Area of the base} = 4\frac{3}{8} \text{ ft}^2$$

$$\text{Height} = 2\frac{1}{2} \text{ ft.}$$

## Station B

Make a sketch of the figure. Write the length, the width, and height in feet. Then, calculate the volume.

Rectangular prism:

Length is  $2\frac{1}{2}$  times the height.

Width is  $\frac{3}{4}$  as long as the height.

Height = 3 ft.

## Station C

Write two different expressions to represent the volume, and explain what each expression represents.

# Station D

Calculate the volume.

# Station E

Calculate the volume.

# Station F

## Challenge:

Determine the volume of a rectangular prism whose length and width are in a ratio of 3:1. The width and height are in a ratio of 2:3. The length of the rectangular prism is 5 ft.

### Additional Resource Materials

The following could be used to provide structure in constructing a dot plot, histogram, or box plot of the rainfall data. A similar type of grid (or graph paper) could be prepared for students as they complete the Problem Set. The grid provided for students should not include the units along the horizontal axis since that is part of what they are expected to do in preparing their summaries.

The following table could be used for students requiring some structure in calculating the mean absolute deviation, or MAD.

### Template for Lesson 22: Summarizing a Poster

Step 1: What was the statistical question presented on this poster?

Step 2: How was the data collected?

Step 3: What graphs and calculations were used to summarize data?

Summarize at least one graph presented on the poster. (For example, was it a dot plot? What was represented on the scale?) Summarize any appropriate numerical summaries of the data (for example, the mean or the median). Also indicate why these summaries were selected.

Step 4: Summarize the answer to the statistical question.
